***In the Claims:***

Please add following new claims:

12. (New) A liquid crystal display, comprising:
  - a first panel having a first electrode and a second electrode that are separated from each other and generate electric field by applying voltage;
  - a second panel spaced apart from said first panel;
  - a liquid crystal layer interposed between said first panel and said second panel, wherein liquid crystal molecules are aligned substantially parallel to said first panel and said second panel; and
  - a plurality of spacers dispersed in the liquid crystal layer,wherein the spacers absorb ionic impurities and dissipate electrostatic charges.
13. (New) The liquid crystal display of claim 12, further comprising a pair of polarizers attached to the outer surfaces of the first and the second panels, wherein polarizing directions of the polarizers are substantially perpendicular to each other.
14. (New) The liquid crystal display of claim 13, wherein the spacers align the liquid crystal molecules near the spacers substantially parallel to surfaces of the spacers.

15. (New) The liquid crystal display of claim 13, wherein the spacers align the liquid crystal molecules near the spacers substantially perpendicular to the surfaces of the spacers.
